

## Press Release

### **Trust1Team and Connective team up to accelerate Digital Identity and Digital Signatures Worldwide**

**Antwerp – April 29, 2019 - Connective, a well-known reference in the field of digital transaction management and technology specialist Trust1Team (T1T), today announced a strategic partnership to accelerate Connective’s growth in the European and global market of digital identity and digital signatures solutions.**

In an expanding digital world, governments, companies and individuals increasingly rely on digital identification to be able to offer digital services around the world and to digitally sign all types of documents following the best standards and regulations.

Connective already offers innovative digital solutions that are mainly focused on the western European market and is currently making huge investments to become a global player. In view of this international expansion and support for cross-border businesses, the harmonization of EU identity schemes is needed. Connective will facilitate this harmonization, by creating an identity hub between all available identities delivered by Public Authorities and private initiatives such as itsme® (BE) or iDIN (NL) that can provide substantial or strong guarantees on identity. Thanks to the partnership with T1T, Connective can accelerate this growth plan and roll out its services throughout Europe (eIDAS), and even worldwide, at a faster pace. With these enhanced signing and identification solutions Connective will be able to allow any kind of organization, government to onboard and engage customers and citizens across the world in a secure and intuitive way.

**Filip Verreth, Chief Product Officer of Connective explains why they chose Trust1Team:**

*“T1T’s significant experience and proven track record within the identification industry convinced us that they are the perfect partner to support our international expansion strategy. T1T has an amazing product and innovative technology, which we look forward to incorporating into our European and global offering. Its digital technology allows us to support both national E-ID’s as well as local and corporate identities. Because of its modular configuration we can quickly roll out to any other country.”*

**Michallis Pashidis, CEO of Trust1Team comments:**

*“Connective and Trust1Team share the same vision on the future of digital identity. We are enthusiastic about the opportunity to help each other to further accelerate our international expansion and become a global leader in online authentication, identification, verification and electronic signatures.”*
